I have the right to work in the UK

PERSONAL PROFILE/SUMMARY:

Who I am: I'm a full-stack software engineer with over 10 years' experience and passionate about high-load projects.
What I can do: Lead frontend of your project: lead planning processes, design architecture, develop UI libraries, etc.
What I'm looking for: Seeking a Senior Frontend Developer, Software Developer or Software Engineer position. My ideal role has a diverse, kind, hypercompetent team: more than anything else, I plan to choose my next role based on the people. I want to work not just with smart people, but with good people.

Some of my superpowers:
- Strong sense of good UX and design (I have an art education and experience building delightful user experiences).
- Strong architectural thinking skills.
- Encyclopaedic knowledge of seemingly everything going on in an organisation (my interest is product engineering).
- Clear written and spoken communication about complex topics in simple terms, to engineers, nonengineers, execs, and customers alike.
- Able to quickly build trust and enable your team's to be high performing.
- Able to make good decisions in complex situations where there's often no "right answer".

WORK EXPERIENCE:

Nornickel - Senior Frontend Engineer   Feb 2022 - Present

- Led the development of the central city management system, CityOnline, a website geared towards Digital Solutions for a Smart City.
- Architected the React Component Library and implemented micro-frontend architecture.
- Created a real-time traffic monitoring dashboard written entirely in JavaScript.
- Gathered site performance metrics, and made improvements.
- Investigated incidents and tackle problems related to services.
- Lead planning processes and roadmap prioritization ensuring alignment within the team and with wider business goals and objectives.
- Problem-Solving.

Sber - Senior Frontend Engineer   May 2021 - Feb 2022

- Architected the core API and React Component Library.
- Architected the company's advertising network - a system for placing contextual advertising.
- Managed the technical roadmap for 8 engineers.
- Responsible for the productivity of our frontend team.
- Trained the team in related best practices.
- Led migration from Bitrix CMS to a React-based architecture.
- Focused on performance and cross-platform browser and device support.

Yandex - Frontend Engineer   May 2016 - Oct 2020

- Pioneered the advancement of the Block-Element-Modifier (BEM) methodology.
- Managed the BEM documentation team, bringing BEM to industry standard in Russia.
- Contributed heavily to the launch of Yandex.Cloud.
- Contributed heavily to open source projects and internal open source projects, and was the largest contributor to our technical blog BEM.

TECHNOLOGIES:

- Proficient: Javascript, TypeScript, React, Software Engineering, Node.js, Next.js, CSS, Sass, HTML, SQL.
- Familiar: Python, GraphQL, Docker, AWS, Nest.js, REST, CI/CD.

HOBBIES AND INTERESTS:

- Alpine skiing, cars, workout, running.
