

SERGEY BOCHAROV

Senior / Staff Software Engineer - Frontend, Full-Stack & Platform

Farnham, Surrey, UK | Global Talent Visa - no sponsorship required, valid until Jan 2029

whatsupsergey@gmail.com | +44 7469 656864 | github.com/godfreyd | linkedin.com/in/bocharovsergey | sergeybocharov.com

SUMMARY

Senior Software Engineer and Technical Lead with **12+ years of experience** designing and building large-scale web applications, developer platforms, cloud systems and frontend infrastructure. Deep expertise in **TypeScript, JavaScript, React, Node.js and PostgreSQL**, with hands-on work across frontend architecture, backend services, API design, real-time systems, authentication, SSR, cloud infrastructure, performance and CI/CD. Former Yandex engineer and engineering lead; led a technical documentation engineering team from **5 to 12 engineers** and built shared platform infrastructure used across approximately **42 internal teams**.

TECHNICAL EXPERTISE

Languages & Runtime: TypeScript, JavaScript, Node.js, SQL

Frontend & Platform: React, Next.js, Redux, Zustand, SSR, component architecture, design systems, monorepos, Lerna, Webpack, Vite, Bazel

Backend & Protocols: REST, GraphQL, WebSockets, OAuth 2.0, Express, NestJS, serverless architecture

Data & Cloud: PostgreSQL, DynamoDB, AWS Lambda, Cognito, RDS, S3, Cloudflare

Infrastructure & Quality: Docker, Terraform, GitLab CI/CD, Jest, Testing Library, Playwright, Cypress, TDD, RUM

Document / Developer Tooling: DITA, XLIFF, SDK design, document transformation pipelines, reusable engineering tooling

EXPERIENCE

Emerging Travel Group | Senior Frontend Software Engineer | Remote, UK | Aug 2023 - Present

- Designed and delivered production systems across **React, TypeScript and Node.js**, spanning browser, API and serverless layers.
- Designed and implemented a secure **two-factor authentication** system integrating frontend authentication flows with backend services.
- Built serverless backend integrations using **AWS Lambda**.
- Profiled and optimised React rendering and API request patterns, improving page-load performance across core user flows by **15%**.
- Owned features end-to-end from technical design and prototyping through implementation, testing and production rollout.

Nornickel | Senior Full-Stack Software Engineer | Remote | Feb 2022 - Aug 2023

- Led full-stack development of **CityOnline**, integrating **30+ municipal services across 5 regions** and contributing to a **25% increase in DAU**.
- Designed a real-time public transport monitoring system using **TypeScript, WebSockets and 2GIS APIs**, improving ETA accuracy by **35%**.
- Designed and implemented **REST APIs**, backend services and PostgreSQL data models supporting transactional order-management workflows.
- Worked across frontend, backend, external API integration and persistence layers, including integration of heterogeneous external services behind consistent application interfaces.

Sber | Senior Frontend Software Engineer / Frontend Lead | Moscow, Russia | May 2021 - Feb 2022

- Built and technically led a **6-engineer frontend team** responsible for re-architecting and relaunching the product on a modern frontend stack.
- Owned frontend architecture and drove technical design discussions with **Sber Devices and Sber Cloud** engineering teams.
- Designed an analytics-driven **Real User Monitoring (RUM)** system; production telemetry helped reduce advertising load time by **40%**.
- Designed experimentation infrastructure and A/B tests using **Bayesian statistical analysis** to measure conversion and UX changes.

Yandex | Software Engineer / Engineering Lead | Moscow, Russia | May 2016 - Oct 2020

- Led a technical documentation engineering team, scaling it from **5 to 12 engineers**, while remaining hands-on with architecture and development.
- Architected and evolved a shared **React/TypeScript component platform** serving approximately **42 internal engineering teams**.
- Owned the architecture of a **Lerna-based monorepo** and the integration model for UI packages developed independently by multiple product teams.
- Defined and evolved shared **component APIs and contracts**: analysed competing team requirements, extracted common abstractions and drove cross-team agreement on unified interfaces and releases.
- Led migration of Yandex's core corporate UI infrastructure from **i-bem.js to React and TypeScript**.
- Designed and implemented multiple **server-side rendering (SSR)** solutions and reusable infrastructure for React applications.
- Designed internal **SDKs and document-processing tooling**, including a round-trip localisation pipeline converting **DITA -> XLIFF + structural skeletons -> translated DITA** while preserving document structure.
- Contributed to the launch of **Yandex Cloud**, including development of the Compute Cloud administration interface.

EDUCATION

M.S. Mechanical Engineering - Ivanovo University of Chemical Technology, Russia
